IT SKILLS

- **Operating System:** - Windows
- **Microsoft Package:** - Word, Excel, Power Point

Project EXPERIENCE

1) Study of Sewage treatment plant Karad: - In this project concentrate their Sewage treatment process to ensure that it complies with regulatory guidelines. The main purpose of Sewage treatment process is to remove the various constituents of the polluting load: solids, organic carbon, nutrients, inorganic salts, metals, pathogens etc. Effective sewage water collection and treatment are of great importance from the standpoint of both; environmental and public health. Sewage treatment operations are done by various methods in order to reduce its water and organic content, and the ultimate goal of sewage water management is the protection of the environment in a manner public health and socio-economic concerns. In this Sewage water techniques, factors affecting selection and design Sewage water systems are discussed briefly

2) Noise Monitoring in Kolhapur City during Ganesh Festival: Noise pollution attained record levels during the Ganesh immersion processions in Kolhapur city this year, found a study conducted by the environmental science department of Shivaji University Kolhapur. The department checked the noise levels at different locations in all four zones — industrial, residential, commercial and silent. In general observation of the study, it is concluded that the it has been increased due to the use of various types of music systems, human activities and increase in human population (crowd) during the Ganesh festival in Kolhapur City. In general observation of the study, it was noted that the has been increased due to the use of various types of music systems, human activities and increase in human population i.e., crowd during the Ganesh festival in Kolhapur City.
