

Rayat Shikshan Sanstha's  
**Sadguru Gadage Maharaj College, Karad**  
(An Autonomous College)  
Affiliated to Shivaji University, Kolhapur.

**Accredited 'A+' Grade' with CGPA 3.63 by NAAC**

**ISO 9001-2015 Certified, RUSA Beneficiary & NAAC Designated Mentor College**

**Revised Syllabus as per NEP-2020**

**For**

**M. Sc. Part-I**

**Chemistry**

**Syllabus to be implemented from**

**July, 2023 onwards.**

Rayat Shikshan Sanstha's  
**Sadguru Gadage Maharaj College, Karad**  
(An Autonomous College)  
Affiliated to Shivaji University, Kolhapur  
**Revised Syllabus for the Master of Science in Chemistry(As per NEP - 2020)**  
**Applicable from the Academic Year 2023 –24**

1. **Title:** M.Sc. Chemistry
2. **Faculty:** Faculty of Science and Technology.
3. **Year of Implementation:** For M. Sc. I (Semester I and Semester II): From July 2023 and for M. Sc. II (Semester III and Semester IV): From June 2024.
4. **Program Outcomes (POs):**
  - a) Demonstrate, solve, and have an understanding of major concepts in all disciplines of Chemistry.
  - b) Solve problems, think methodically, and independently and draw logical conclusions.
  - c) Employ critical thinking and scientific knowledge to design, carry out, record, and analyze the results of chemical reactions.
  - d) Create an awareness of the impact of Chemistry on the environment, society, and development among the scientific community.
  - e) Find out the green route for the chemical reactions for sustainable development.
  - f) To inculcate scientific temperament in the students and among the scientific community.
  - g) Use modern techniques, sophisticated equipment, and various Chemistry softwares.
5. **Program-Specific Outcomes (PSOs):**
  - a) Students will develop critical thinking and the Analytical mind by taking knowledge in advanced-level Chemistry
  - b) The relevance of the extension of Chemistry in the social context for solving social issues
  - c) Analytical or experimental skills make the students capable of doing higher-level research work in the emerging fields of Chemistry
  - d) Students will gain a thorough Knowledge of the subject to work on projects at different research and academic institutions.
  - e) Students will become familiar with the different branches of Chemistry like Analytical, Organic, Inorganic, Physical, Environmental, Polymer, and Biochemistry. They will also learn to apply appropriate techniques for the qualitative and quantitative analysis of chemicals in laboratories and in industries.
  - f) Employability Skills shall enable the students to find jobs in core Chemistry and other related fields
  - g) Entrepreneurial Skills shall empower the students to start their industries/businesses in core Chemistry fields

6. The entire course of M. Sc. (Chemistry) will be of **four Semesters** spread over two years.
7. Pattern of Examination: The Examinations will be conducted **semester wise for theory and Practical.**
8. **Fee structure:** As per Shivaji University guidelines.
9. **Eligibility criteria for Admission:** B.Sc. in Chemistry.
10. **Medium of Instruction:** English

#### 11. Structure of course: Given in Framework Chart

The University department and University affiliated colleges centers offers following specializations at M. Sc. II (Semester III and IV):

- i) Physical Chemistry
- ii) Inorganic Chemistry
- iii) Organic Chemistry
- iv) Analytical Chemistry
- v) Applied Chemistry (Only at University Department)
- vi) Industrial Chemistry (Only at University Department)

#### 12. Scheme of Teaching and Examination:

(Applicable to University Department and University affiliated colleges centers)

- a. Each unit in theory course shall comprise 15 lectures, each of 60 minutes' duration and there shall be four lectures per theory course per week.
- b. Entire course of M. Sc. Chemistry will be of **2200** marks.
- c. Examination of each **theory course** shall be of **100 marks** (80 university examination + 20 internal assessment). University examination of 80 marks (3 hours' duration) will be conducted at the end of each Semester. Internal assessment of 20 marks will be done before the semester examination during each semester.
- d. Examination of practical course shall be of 150 marks per semester for first year and 50 Marks for second year.
- e. Research Project is compulsory at second year. (10 Credits)
- f. On-the Job training is mandatory at second semester (4 Credits)
- g. Question papers will be set in the view of the entire syllabus and preferably covering each unit of the syllabus. Equal weightage should be provided to each unit.

#### 13. Standard of Passing:

There will be separate passing for theory courses and practical courses. Minimum 40% marks will be required for passing separately for theory and practical courses.

#### **14. Nature of Question paper and scheme of marking:**

- Theory question paper: Maximum marks -80
- Total No. of question – 7
- All questions are of equal marks. Out of these seven questions five questions are to be attempted. Question No.1 is compulsory and objective/short answer type. Total number of bits is 16 with one mark each. Total marks – 16 (which cover multiple choices, fill in the blanks, definition, true or false). These questions will be answered along with other questions in the same answer book.
- Remaining 6 question are divided into two sections, namely section-I and section – II. Four questions are to be attempted from these two sections such that not more than two questions from any of the section. Both sections are to be written in the same answer book.

## M. Sc. Part – I (Semester – I)

MJ-MCTO23-101/ MJ-MCTA23-101: Organic Chemistry-I [Credit 4, 60 L Hours]	
<p><b>UNIT-I</b></p> <p><b>A) Reaction Mechanism: Structure and Reactivity [8L]</b></p> <p>Types of reactions, strength of acids and bases. Generation, structure, stability, and reactivity of carbenes, arynes, nitrenes, and effect of structure on reactivity, resonance, and steric effects. Thermodynamic and Kinetic requirements, Introduction to Kinetic and Thermodynamic control reaction.</p> <p><b>B) Aliphatic Nucleophilic substitutions [7L]</b></p> <p>SN<sub>2</sub>, SN<sub>1</sub> and SN<sub>i</sub> reactions with respect to mechanism and stereochemistry. Nucleophilic substitutions at allylic, aliphatic trigonal, benzylic, and vinylic carbons. Reactivity, the effect of substrate structure, the effect of attacking nucleophiles, leaving groups, and reaction medium. SN reactions at bridgehead carbon, competition between SN<sub>1</sub> and SN<sub>2</sub>, Ambident nucleophiles, Neighboring Group Participation.</p>	<b>15 L</b>
<p><b>UNIT-II</b></p> <p><b>A) Introduction to aromaticity in Benzenoid and non-Benzenoid compounds [7 L]</b></p> <p>Three, four, and five-membered systems. tropone, tropolone, and tropylium salts.</p> <p><b>B) I- Aromatic Electrophilic Substitutions [6 L]</b></p> <p>Introduction, the arenium ion mechanism, orientation and reactivity in Nitration, Sulphonation, Friedel-Crafts, and Halogenation in aromatic systems, energy profile diagrams. The ortho/para ratio, ipso attack, and orientation in their ring systems. Diazo-coupling, Vilsmeier-Hack reaction, Von Richter rearrangement.</p> <p><b>II-Nucleophilic aromatic substitution reactions SN<sub>1</sub>, SN<sub>2</sub> [2 L]</b></p>	<b>15 L</b>
<p><b>UNIT-III</b></p> <p><b>A) Elimination Reactions [5 L]</b></p> <p>The E<sub>1</sub>, E<sub>2</sub> and E<sub>1cB</sub> mechanisms. Orientation in elimination reactions. Hoffmann versus Saytzeff elimination, Reactivity: effects of substrate structures, attacking base, the leaving group, the nature of medium on elimination reactions. Pyrolytic elimination reactions.</p> <p><b>B) Study of the following reactions [10 L]</b></p> <p>Mechanism of condensation reaction involving enolates, Benzoin, Stobbe, Robinson annulation, Simon-Smith, Vlhmann, Mc-Murry, Prins, Wurtz-Fittig reaction, Hunsdiecker</p>	<b>15 L</b>

reaction, Pummerer, Corey-Chaykovsky reaction, Nef reaction, Passerini reaction, Baylis-Hilman reaction, Mitsunobu Reaction.	
<b>UNIT-IV</b> <b>Stereochemistry</b> Concept of chirality, prochiral relationship, homotopic, enantiotopic, and diastereotopic groups, and faces. Racemic modifications and their resolution. R and S nomenclature. Conformational analysis: Cyclohexane derivatives, stability, and reactivity, Conformational analysis of disubstituted cyclohexanes. Introduction of optical activity in the absence of chiral carbon.	<b>15 L</b>
<b>RECOMMENDED BOOKS:</b> 1. A Guidebook to Mechanism in Organic Chemistry (Orient-Longmans)- PeterSykes 2. Organic Reaction Mechanism (Benjamin) R. Breslow 3. Mechanism and Structure in Organic Chemistry (Holt Reinh.)E. S. Gould. 4. Organic Chemistry (McGraw-Hill) Hendrikson, Cram and Hammond. 5. Basic principles of Organic Chemistry (Benjamin) J. D. Roberts and M. C. Caserio. 6. Reactive Intermediates in Organic Chemistry (John Wiley) N. S. Issacs. 7. Stereochemistry of Carbon Compounds. (McGraw-Hill) E.L.Eliel 8. Organic Stereochemistry (McGraw-Hill) by Hallas. 9. Organic Reaction Mechanism (McGraw-Hill) R. K. Bansal. 10. Organic Chemistry- R. T. Morrison and R. N. Boyd,(Prentice Hall.) 11. Modern Organic Reactions (Benjamin) H. O. House. 12. Principle of Organic Synthesis- R.O.C. Norman and J. M. Coxon. (ELBS) 13. Reaction Mechanism in Organic Chemistry- S. M. Mukharji and S. P. Singh. 14. Stereochemistry of Organic Compounds by D. Nasipuri. 15. Advanced Organic Chemistry (McGraw-Hill) J. March. 16. Introduction to Stereochemistry (Benjamin) K. Mislow. 17. Stereochemistry by P. S. Kalsi (New Age International)	
<b>MJ-MCTO23-102/ MJ-MCTA23-102: Inorganic Chemistry-I [Credit 4, 60 L Hours]</b>	
<b>UNIT-I</b> <b>Chemistry of Transition Elements</b> General characteristics and properties of transition elements, Coordination chemistry of	<b>15 L</b>

<p>transition metal ions, Stereochemistry of coordination compounds, Crystal field theory (CFT) for tetrahedral, octahedral, square pyramidal, square planar, and trigonal bipyramidal fields, Crystal field stabilization energy (CFSE), Factors affecting the crystal field splitting parameters, Strong and weak field complexes, Spectrochemical series, Jahn-Teller Distortion, Applications of CFT for defining kinetic properties of complexes and site selections of cations, anions in spinels. Molecular orbital theory (MOT) for octahedral complexes involving sigma- and pi-bonding, and for tetrahedral complexes.</p>	
<p><b>UNIT-II</b></p> <p><b>Organometallic Chemistry</b></p> <p>Definition and criteria of organometallic compounds, Classification of organometallic compounds based on hapticity and polarity of M-C bond, Nomenclature and general characteristics, 18 electron rule-applications and exceptions, Synthesis, bonding, properties and reactivity of representative organometallic compounds (-CO, -NO, -alkene, -alkyne), Reactions of organometallic compounds: Oxidative addition, reductive elimination, Insertion and elimination, Organometallics in homogeneous catalysis: Hydrogenation of olefins, hydroformylation reaction, Monsanto Acetic Acid, and polymerization of olefins.</p>	<p><b>15 L</b></p>
<p><b>UNIT-III</b></p> <p><b>Transition Metal Carbonyls and Related Compounds</b></p> <p>Introduction, Preparation, structure, physical and chemical properties of metal carbonyls, Anionic and cationic carbonyl complexes, Lewis base derivatives of carbonyls, Carbonylhydrides, Carbonyl halides, Miscellaneous derivatives of metal carbonyls, Nitrosyl complexes of transition metals, complexes of molecular nitrogen, Cyanide complexes of transition metals.</p>	<p><b>15 L</b></p>
<p><b>UNIT-IV</b></p> <p><b>Molecular Symmetry and Group Theory</b></p> <p>Introduction to Symmetry, Symmetry operations, Symmetry elements, Point group and its classification (C<sub>n</sub>-type, D<sub>n</sub>-type, Special-type), Schoenflies symbol for point groups, Group and its Properties, Group multiplication table, Matrix representation of symmetry elements, Reducible and Irreducible representations, Properties of Irreducible representation, Great orthogonal theorem (without proof) and its importance, Construction of character table for water molecule, Mulliken symbolism rules for irreducible representations,</p>	<p><b>15 L</b></p>
<p><b>RECOMMENDED BOOKS:</b></p>	

<ol style="list-style-type: none"> <li>1. Fundamental Concepts of Inorganic Chemistry (Vol I to VII), A.K. Das and M. Das, CBS Publishers.</li> <li>2. A. F. Wells, Structural Inorganic Chemistry– 5<sup>th</sup> edition(1984)</li> <li>3. J. H. Huheey, Inorganic Chemistry-Principles, structure and reactivity, Harper and Row Publisher, Inc. New York(1972)</li> <li>4. J. D. Lee, Concise Inorganic Chemistry, Elbs with Chapman and Hall, London</li> <li>5. A. R. West, Plenum, Solid State Chemistry, and its applications</li> <li>6. H. J. Emeleus and A. G. Sharpe, Modern Inorganic Chemistry</li> <li>7. A. R. West, Basic Solid-State Chemistry, 2<sup>nd</sup> edition</li> <li>8. M. C. Day and J. Selbin, Theoretical Inorganic Chemistry, Reinhold, EWAP</li> <li>9. A. H. Hanney, Solid State Chemistry, A. H. Publications</li> <li>10. O. A. Phiops, Metals, and Metabolism</li> <li>11. Cullen Dolphin and James, Biological aspects of Inorganic Chemistry</li> <li>12. Williams, An Introduction to Bioinorganic Chemistry</li> <li>13. M. N. Hughes, Inorganic Chemistry of Biological Processes</li> <li>14. Ochi, Bioinorganic Chemistry</li> <li>15. F.A. Cotton, R.G. Wilkinson. Advanced Inorganic Chemistry</li> <li>16. Willam L. Jooly, Modern Inorganic Chemistry</li> <li>17. Manas Chanda, Atomic Structure and Chemical Bonding</li> <li>18. N. N. Greenwood and A. Earnshaw, Chemistry of elements, Pergamon</li> <li>19. S. J. Armstrong, 5<sup>th</sup> Eds., Oxford University Press.</li> <li>23. Inorganic Chemistry, H. E. House, Elsevier Publishers.</li> </ol>	
<b>EO-MCTO23-103/ EO-MCTA23-103 Elective Paper: Organic Chemistry-II</b>	
<b>[Credit 4, 60 L Hours]</b>	
<p><b>UNIT-I</b></p> <p><b>Study of the following rearrangements</b></p> <p>Curtius, Lossen, Witting, Neber, Orton, Hofmann-Martius, Demjanov, Dakin, Rupe, Gabriel–Colman, Carroll, Payne, Favorskii, Sommelet-Hauser, Stevens.</p>	<b>15 L</b>
<p><b>UNIT-II</b></p>	<b>15 L</b>

<p><b>Study of Coupling Reactions</b> Heck, Suzuki, Stille, Negishi, Sonogashira, Buchwald-Hartwig, Cadiot-Chodkiewicz, A<sup>3</sup>, Kumada, Ulman, Chanlam, Hiyama coupling, Tsuji-Trost reaction.</p>	
<p><b>UNIT-III</b> <b>Oxidation</b> Applications of oxidizing agents: Woodward-Prevost hydroxylation, Chloranil, and hydrogen peroxide. Swern oxidation. PCC (Corey's reagent), PDC (Cornforth reagent), Baeyer-Villiger oxidation. Dakin oxidation, Ceric Ammonium Nitrate (CAN), Sodium Hypochlorite, The Babler Oxidation, Corey Kim Oxidation, Wacker Oxidation, NaIO<sub>4</sub> and HIO<sub>4</sub>, Etard oxidation.</p>	<b>15 L</b>
<p><b>UNIT-IV</b> <b>Reductions</b> Study of following reductions- Catalytic hydrogenation using homogeneous and heterogeneous catalysts. Study of the following reducing reagents and reactions: Metal complex hydrides, Wolff-Kishner, Birch, Sodium in alcohol, Fe in HCl, Adam's catalyst, Lindlar catalyst, TBTH, Corey-Bakshi-Shibata reduction (CBS reagent), Zinc borohydride, Luche reduction (CeCl<sub>3</sub>, NaBH<sub>4</sub>, MeOH).</p>	<b>15 L</b>
<p><b>RECOMMENDED BOOKS:</b></p> <ol style="list-style-type: none"> <li>1. Modern Synthetic Reactions-(Benjamin) H. O. House.</li> <li>2. Reagents in Organic Synthesis-(John Wiley) Fieser and Fieser</li> <li>3. Principles of Organic Synthesis-(Methuen) R. O. C. Norman</li> <li>4. Hydroboration- S. C. Brown.</li> <li>5. Advances in Organometallic Chemistry- (A.P.)F. C. A. Stone and R. West.</li> <li>6. Organic Chemistry (Longman)Vol. I &amp; Vol. II- Finar</li> <li>7. Oxidation by-(Marcel Dekker) Augustin</li> <li>8. Advanced Organic Chemistry 2nd Ed. R R. Carey and R. J. Sundburg</li> <li>9. Organic Synthesis-(Prentice Hall)R. E. Ireland.</li> <li>10. Homogeneous Hydrogenation-(J. K.) B. R. James.</li> <li>11. Comprehensive Organic Chemistry- (Pargamon) Barton and Ollis.</li> <li>12. Organic Reactions- R. Adams.</li> <li>13. Some Modern Methods of Organic Synthesis-(Cambridge) W. Carruthares.</li> <li>14. Organic Chemistry- Jonathan Clayden</li> </ol>	

**EI-MCTO23-103/ EI-MCTA23-103: Elective Paper: Inorganic Chemistry -II**  
**[Credit 4, 60 L Hours]**

<p><b>Unit I</b></p> <p><b>Non-aqueous solvents</b></p> <p>Classification of solvents, Characteristics of solvents, Types of reactions in solvents, Physical and chemical properties of the non-aqueous solvents such as liquid ammonia, sulfur dioxide, dinitrogen tetroxide, anhydrous sulphuric acid, and molten salts.</p>	<b>15 L</b>
<p><b>Unit II</b></p> <p><b>Nuclear and Radiochemistry</b></p> <p>Nuclear stability and nuclear binding energy, Radioactivity, and radioactive decay, Classification of nuclear reactions, Nuclear reaction cross section, Nuclear fission, Nuclear fusion, Artificial or Induced Radioactivity, Designing, and constructions of Nuclear Reactors, Nuclear Reactors in India, Applications of radioactivity in agriculture, medical field, and industry.</p>	<b>15 L</b>

**EP-MCTO23-103/ EP-MCTA23-103: Elective Paper: Physical Chemistry-I**  
**[Credit 4, 60 L Hours]**

<p><b>UNIT-I</b></p> <p><b>PHOTOCHEMISTRY</b></p> <p>Absorption of light, laws of photochemistry, electronic structure of molecules, molecular orbital, electronically excited singlet states, designation based on multiplicity rule, construction of Jablonski diagram, electronic transition, Frank Condon principle, selection rules, intensity of absorption bands, nature of electronic spectra and primary process, photo-dissociation, pre-dissociation, Photo physical phenomena: photo-physical pathways of excited molecular system (radiative and non-radiative), prompt fluorescence, delayed fluorescence, and phosphorescence, fluorescence quenching: concentration quenching, collisional quenching, quenching by excimer and exciplex emission, fluorescence resonance energy transfer between photo-excited donor and acceptor systems. Stern-Volmer relation, critical energy transfer distances, energy transfer efficiency, examples and applications in chemical analysis. Photochemical reactions, photo-oxidation, photoreduction, photo-dimerization, photoisomerization and photosensitized reactions. Photochemistry of environment: Greenhouse effect. Numerical Problems</p>	<b>15 L</b>
<p><b>UNIT-II</b></p>	<b>15 L</b>

<p><b>ELECTROCHEMISTRY</b></p> <p>Electrical double layer, theories of double layer-Helmholtz-Perrintheory, Gouy and Chapman theory, Stern theory. electro-capillary phenomena, electro- capillary curve. Lipmann equation, Thermodynamics of electrocapillary phenomena, Electrokinetic phenomena: Electro-osmosis, electrophoresis. Streaming and Sedimentation potentials. Zeta potential and its determination by electrophoresis, influence of ions on Zeta potential. Acid and alkaline storage batteries, Numerical Problems</p>	
<p><b>UNIT III</b></p> <p><b>BIOPHYSICAL CHEMISTRY</b></p> <p>Introduction to biophysical chemistry: Amino acids, peptide, proteins, enzymes, nucleic acids: Introduction to primary, secondary, tertiary and quaternary structures, acid base properties. Intermolecular forces: H-bonding, Van der Waals forces, Lenard-Jones potential, columbic interactions, 1-4 interactions, hydrophobic hydration and interaction. Protein folding/defolding phenomena, use of spectroscopic and thermodynamic tools for protein-ligand binding equilibrium study, hydrodynamic and equilibrium thermodynamic methods for determination of molar mass of biological macromolecules.</p>	<b>15 L</b>
<p><b>UNIT-IV</b></p> <p><b>MACROMOLECULES</b></p> <p>Macromolecules: Mechanism of polymerization, molecular weight of a polymer (Number and mass average) viscosity average molecular weight, numerical problems. Degree of polymerization and molecular weight, practical significance of polymer molecular weight, methods of determining molecular weights (Osmometry, viscometry, light scattering, diffusion and ultra centrifugation)</p> <p>Chemistry of polymerization: Ceiling temperature, Free radical polymerization (Initiation, propagation and termination), kinetics of free radical polymerization, step growth polymerization (Polycondensation), molecular weight distribution, kinetics of step polymerization, cationic and anionic polymerization. Electronically conducting polymers, thermodynamics of polymer solutions: Flory-Huggins Theory. Glass transition temperature and molecular weight, factors influencing Glass transition temperature, determination of glass transition temperature, Numerical Problems</p>	<b>15L</b>
<p><b>RECOMMENDED BOOKS:</b></p> <ol style="list-style-type: none"> <li>1. Biophysical Chemistry – J. P. Allen, Wiley-Blackwell, 2008.</li> <li>2. Biophysical Chemistry – A. Cooper, RSC, 2004.</li> <li>3. Thermodynamics of Biochemical Reactions– R.A. Alberty, Wiley-Interscience,</li> </ol>	

<p>2003.</p> <ol style="list-style-type: none"> <li>4. Textbook of Biophysical Chemistry – U.N. Dash, McMillan India, 2006.</li> <li>5. Physical Chemistry of macromolecules- D. D. Deshpande, Vishal Publications.</li> <li>6. Polymer Chemistry- F. W. Billmeyer Jr, John-Wiley&amp;Sons, 1971.</li> <li>7. An Introduction to Electrochemistry by S. Glasstone</li> <li>8. ## Chemistry Major Practical Course

**A) Organic Chemistry Experiments****Organic Preparations (Any Five):**

(One-stage preparations involving various types of reactions and confirmation of product by TLC)

1. Coumarin Synthesis- 7-OH-4-methyl coumarin from Resorcinol and EAA.
2. Knoevenagel condensation reaction-Reaction of aldehyde and malononitrile.
3. Preparation of Hydantoin.
4. Synthesis of triazoles- Reaction of aldehyde and thiosemicarbazide.
5. Preparation of benzimidazole from OPD
6. Preparation of Orange II
7. Synthesis of dihydropyrimidone by Biginelli reaction
8. Synthesis of Dibenzylidene acetone
9. Preparation of Benzanilide from Benzophenone Oxime
10. Benzoic acid and benzyl alcohol from benzaldehyde (Cannizarro reaction).
11. Preparation of m-dinitrobenzene from nitrobenzene.

(Any suitable preparation may be added)

**B) Inorganic Section**

## 1) Ore Analysis

- i) Determination of Silica and Manganese in Pyrolusite ore.
- ii) Determination of iron from Haematite ore.

## 2) Alloy Analysis

- i) Determination of tin & lead from Solder alloy.
- ii) Determination of copper and nickel from monel metal alloy.

## 3) Determination of concentration of phosphates in water samples colorimetrically.

Any other advanced experiments related to Inorganic Chemistry

**C) Physical Section**

- 1) Chemical Kinetics: Kinetics of reaction between bromate and iodide.
- 2) Adsorption: Study of adsorption of acetic acid on charcoal.
- 3) Viscosity: Determination of molecular weight of polymers.
- 4) Refractometry:

- i) Determination of molecular radius of molecule of organic compound.
  - ii) Determination of concentration of sugar in unknown sample.
- 5) Polarimetry: Kinetics of inversion of cane sugar in presence of strong acid.  
(New experiments may also be added)

**D) Analytical Section**

1. To verify Beer-Lambert's Law for potassium permanganate solution and hence to determine the molar extinction coefficient and unknown concentration of given sample Spectrophotometrically.
2. To determine the iron potentiometrically by titrating with potassium dichromate.
3. To determine the solubility of Calcium oxalate in presence of different concentration of KCl.
4. To determine the solubility of Calcium oxalate in presence of different concentration of HCl.
5. Analysis of pharmaceutical tablets for ibuprofen content.
6. To verify the Beer-Lamberts Law and determine the concentration of given organic dye solution colorimetrically/spectrophotometrically.
7. To estimate the amount of D-glucose in a given solution colorimetrically.
8. To determine the acid value of given oil.

**MJ-MCPO23-106/MJ-MCPA23-106: Practical Paper-II [Credit 2, 60 Hours]**

**Chemistry Minor Practical Course**

**A) Organic Section**

Organic Estimations:(Any Three)

1. Estimation of Unsaturation.
2. Estimation of formalin.
3. Colorimetric Estimation of Dyes.
4. Estimation of Amino acids.
5. Estimation of Glycine.

Any suitable Expt. may be added.

**B) Inorganic Section**

Preparations and purity (Any four)

1. Potassium trioxalatochromate(III) trihydrate

2. cis-potassiumdioxalatodiaquachromate(III)
3. Potassiumhexathiocyanatochromate(III)
4. Bis(dimethylglyoximate)nickel(II)
5. Carbonatotetramminocobalt(III)nitrate
6. Hexamminocobaltic(III)chloride

### C) Physical Section

#### 1. Potentiometry:

- i) Determination of solubility and solubility product of silver halides.
- ii) Determination of binary mixture of weak and strong acid.

#### 2. Conductometry:

- i) Determination of mixture of acids and relative strength of weak acids.
- ii) Determination of solubility of lead sulphate.
- iii) Determination of CMC and  $\Delta G$  of sodium dodecyl sulphate.

#### 3. pH-metry: Determination of dissociation constant of dibasic acid.

### D) Analytical Section

1. Determination of standard deviation from the results obtained by redox titration of iron solution against standard potassium dichromate solution.
2. Determination of sodium from the fertilizer sample using cation exchange chromatography.
3. Determination of calcium from given drug sample.
4. Determination of hardness, alkalinity and salinity of water sample.
5. Separation and estimation of  $\text{Cd}^{2+}$  and  $\text{Zn}^{2+}$  by ion exchange chromatography for given  $\text{Cd}^{2+}$  and  $\text{Zn}^{2+}$  mixture. (Any other experiments may be added)
6. Application of excel spreadsheet for determination of Mean, median, standard deviation and graph plot.

### RECOMMENDED BOOKS:

1. A Text Book of Practical Organic Chemistry- A. I. Vogel.
2. Practical Organic Chemistry- Mann and Saunders.
3. A Handbook of Quantitative and Qualitative Analysis- H. T. Clarke.
4. Organic Synthesis Collective Volumes by Blat.

<ol style="list-style-type: none"> <li>5. Practical Med. Chem..-Dr. K. N. Jayveera, Dr. S. Subramanyam, Dr. K. Yogananda Reddy</li> <li>6. A text book of Quantitative Inorganic Analysis– A. I. Vogel</li> <li>7. Experimental Inorganic Chemistry -W. G. Palmer</li> <li>8. The analysis of minerals and ores of the rarer elements–W.R. Schoeller and A. R. Powell, Charles, Griffin and Company Limited.</li> <li>9. Experimental Inorganic / Physical Chemistry–M. A. Malti, Horwood Series in Chemical Science, Horwood Publishing Chinchster.</li> <li>10. Instrumental Methods of analysis- Willard, Merrit, Dean and Settle.</li> <li>11. A Text book of Qualitative Inorganic Analysis- A. I. Vogel</li> <li>12. ## M. Sc. Part – I (Semester – II)

MJ-MCTO23-201/ MJ-MCTA23-201: Physical Chemistry-II [Credit 4, 60 L Hours]

### UNIT-I

#### QUANTUM CHEMISTRY

Introduction: Wave particle duality of material and DeBroglie's hypothesis, uncertainty principle, Schrodinger equation, wave function, conditions for acceptable wave functions and its interpretation, properties of wavefunctions, Operators and related theorems, algebra of operators, commutator, linear operators, Normalization and orthogonality, Eigenfunctions and Eigenvalues, postulate of quantum mechanics. Solutions of wave equation for a free particle and particle in a box problem, Transition dipole moment integral and selection rules, particle in a box application to electronic spectra of conjugated linear organic molecules. Linear and angular momentum operators, eigen function and eigen values of angular momentum operator, Ladder operator, addition of angular momenta. Spin angular momenta, symmetric and antisymmetric wavefunctions, Pauli Exclusion Principle, spectroscopic term symbols. Numerical problems

15 L

### UNIT-II

#### STATISTICAL THERMODYNAMICS

Probability and distribution, Stirling's Approximation, Weights and configurations, the most probable configuration, Ensembles, ensemble average and time average of property. Statistical equilibrium, thermodynamic probability, Maxwell-Boltzmann (MB) distribution law.

Partition function and its significance. Rotational, translational, vibrational and electronic partition functions. Relationship between partition function and thermodynamic properties, thermodynamic probability and entropy: Boltzmann – Planck equation and third law of thermodynamics, Application to monoatomic gases – Sackur-Tetrode equation, applications to diatomic molecules, Statistical expression for equilibrium constant, Limitations of Maxwell-Boltzmann statistics, Numerical Problems.

15 L

### Unit-III

#### Electrochemistry

Theory of strong electrolytes, Debye - Huckel theory of inter-ionic attraction, ionic atmosphere, time of relaxation, relaxation and electrophoretic effects, Debye-Huckel-Onsagar equation and its validity for dilute solutions and at appreciably concentrated solutions. Deviations from Onsagar equation, Debye-Falkenhagen effect, Wien Effect, Debye-Huckel

15 L

<p>limiting law for osmotic and activity coefficients of dilute electrolytic solutions and its applications to concentrated solutions. Activity and Activity coefficients: forms of activity coefficients and their interrelationship, Debye-Huckel-Bronsted equations. Quantitative and qualitative verification of Debye-Huckel limiting law, The Osmotic coefficient, Bjerrum theory of ion-ion association, the association constant, Types of electrodes, Determination of activity coefficients of an electrolyte using concentration cells, instability constant of silver ammonia complex. degree of dissociation of monobasic weak acid (approximate and accurate), Numerical Problems</p>	
<p><b>UNIT-IV</b></p> <p><b>CHEMICAL KINETICS</b></p> <p>Introduction to basic concepts, Experimental methods of following kinetics of a reaction, chemical and physical (measurement of pressure, volume, EMF, conductance, diffusion current and absorbance) methods and examples. Steady state approximation and study of reaction between NO<sub>2</sub> and F<sub>2</sub>, decomposition of ozone, and nitrogen pentoxide. Ionic reaction: Primary and secondary salt effect, Catalysis: Classification of catalysis, mathematical expression of autocatalytic reactions, Michaelis–Menten enzyme catalysis, Homogeneous catalysis: acid and base catalyzed reactions, Heterogeneous catalysis: Adsorption of gas on a surface and its kinetics, Catalyzed hydrogen-deuterium exchange reaction.</p>	<b>15L</b>
<p><b>RECOMMENDED BOOKS:</b></p> <ol style="list-style-type: none"> <li>1. Introductory Quantum Chemistry-A. K. Chandra.TataMcGraw-Hill.1988.</li> <li>2. Physical Chemistry: A molecular Approach Donald A. McQuarrie and John D. Simon, Viva Books, New Delhi, 1998.</li> <li>3. Quantum Chemistry–Donald A. McQuarrie, Viva Books, NewDelhi,2003.</li> <li>4. 22. Electrochemistry- S. Glasstone, D. VanNostrand,1965
23. Advanced Physical Chemistry-Gurdeep Raj, Goel Publishing House
24. Basic chemical Kinetics-G.L. Agarwal, Tata-McGraw Hill
25. Physical Chemistry– G.M. Barrow, Tata-McGraw Hill, Vth edition,2003.

**MJ-MCTO23-202/ MJ-MCTA23-202: Analytical Chemistry-II**  
**[Credit 4, 60 L Hours]**

**UNIT-I**

**Basics of Analytical Chemistry, Errors, treatments, and statistics**

**Basics of Analysis:** Chemical analysis, instrumental methods, Analytical methods, Techniques of analysis, classification of analytical techniques, Classification of instrumental methods, factors affecting choice of analytical methods, interferences.

**Statistics in Chemical Analysis:** Types and sources of error, determinate and indeterminate errors, accuracy and precision Absolute and relative errors, Minimization of errors, Significant figures, Mean, median and standard deviation, Least square method.

**MS Office in Chemistry applications:** Excel Spreadsheet, Introduction to excel and its applications for computation and graph plotting, calculations using formulas for summation, mean, standard deviation. MS-Word for Chemical Documentation, MS PowerPoint for Virtual Chemical Animations.

Numerical Problems.

**15 L**

<p><b>UNIT-II</b></p> <p><b>Fundamentals of Quantitative Analysis</b></p> <p><b>Volumetric Analysis:</b> Introduction, general terms in volumetric analysis, indicators, indicator theory, choice of indicators. Acid-base titrations, titration curves with example, Buffer solutions, acid-base equilibrium in- polyprotic acids, amino acids, carbonates, bicarbonates, mixture of two acids. Complexometric titrations-stability of complexes, metal-ion buffer, titrations involving unidentate and multidentate ligands. Precipitation titrations and solubility equilibria, indicators, factors affecting solubility, applications of precipitation titrations. Oxidation-reduction equilibria and applications, Nernst equation, titration curves, redox indicators, applications with respect to <math>\text{KMnO}_4</math>, <math>\text{K}_2\text{Cr}_2\text{O}_7</math>, Iodine, and Potassium bromate.</p> <p><b>Gravimetric Analysis:</b> Introduction, general terms used in gravimetry, steps in gravimetric analysis, conditions for precipitation, purity of the precipitate – Co-precipitation and Post-precipitation, precipitation from homogenous solution, organic precipitants. Advantages and disadvantages of gravimetric analysis. Determination of iron gravimetrically from iron ore, determination of lead gravimetrically from Galena ore, determination of Pb gravimetrically from type metal alloy. Problems.</p>	<p><b>15 L</b></p>
<p><b>UNIT-III</b></p> <p><b>Chromatographic methods of separation</b></p> <p>General principle, classification of chromatographic methods, migration rates of solutes, chromatographic behavior of solutes, band broadening, terms in chromatography, plate theory, column efficiency and resolution. Introduction to paper, TLC and column chromatography.</p> <p><b>Gas Chromatography:</b> Basic Principle, Instrumentation, detectors, Applications, Advantages and disadvantages.</p> <p><b>HPLC:</b> Basic Principle, Instrumentation, detectors, applications, advantage and disadvantages.</p> <p><b>Ion exchange chromatography:</b> Introduction and basic principles, instrumentation, types of exchangers, synthesis of ion exchangers, mechanism of ion exchange, exchange theories, methodology, applications. Problems.</p>	<p><b>15 L</b></p>
<p><b>UNIT-IV</b></p> <p><b>Electro Analytical Techniques</b></p> <p><b>a) Voltammetry:</b> Voltammetric methods of analysis, voltametric techniques, current in voltammetry, shape of voltammograms</p>	<p><b>15 L</b></p>

<p><b>Polarography:</b> Introduction, Instrumentation, Ilkovic equation and its verification. Polarographic measurements, Dropping mercury electrode, Determination of half wave potential, qualitative and quantitative applications.</p> <p><b>Amperometry:</b> Basic principles, instrumentation, Amperometric titration curves, Amperometric indicators, procedure for Amperometric titrations, Evaluation of amperometry in research and analytical applications</p> <p><b>b) Electrogravimetry:</b> Introduction, Types of electrogravimetric techniques, Diffusion Migration, Convection, instrumentations, applications.</p>

<b>EI-MCTO23-203/EI-MCTA23-103: Elective Paper: Inorganic Chemistry-III [Credit 4, 60 L Hours]</b>	
<p><b>UNIT-I</b></p> <p><b>Chemistry of Non-transition Elements and their compounds</b></p> <p>Periodic properties of the non-transition elements, Polymorphism in carbon, phosphorous and sulphur, Synthesis, properties and structure of boranes, carboranes, silicates, carbides, phosphazenes, sulphur-nitrogen compounds, peroxo compounds of boron, carbon, sulphur, Structure and bonding in oxy acids of nitrogen, phosphorous, sulphur and halogens, interhalogens, psudohalides</p>	<b>15 L</b>
<p><b>UNIT-II</b></p> <p><b>Stereochemistry and bonding in Main group compounds</b></p> <p>Hybridization and structure of molecules, VSEPR Theory (Postulates and Applications), type of pi-bonding (<math>p\pi-p\pi</math> and <math>p\pi-d\pi</math>) and its consequences, Bent rule, Walsh Diagram, Some simple reactions of covalently bonded molecules (Atomic inversion, Berry Pseudo rotation, Nucleophilic displacement, Free radical reaction).</p>	<b>15 L</b>
<p><b>UNIT-III</b></p> <p><b>Chemistry of f-block elements (Lanthanides and Actinides)</b></p> <p>Occurrence, properties of the f-block elements, colour, oxidation state, Spectral and magnetic properties of lanthanides and actinides, lanthanide contraction, Use of lanthanide compounds as shift reagents, compounds of lanthanides, Photoluminescence properties of lanthanide compounds, Modern methods of separation of lanthanides and actinides, Applications of lanthanide and actinide compounds in Industries.</p>	<b>15 L</b>
<p><b>UNIT-IV</b></p> <p><b>Stability of Metal complexes</b></p> <p>Thermodynamic vs. kinetic stability, Stability constant, Stepwise and overall stability constants with their relation, Trends in stepwise stability constant, Factors affecting the stability of metal complexes with reference to the nature of metal ion and ligand, Chelate effect, Ternary complexes and factors affecting their stabilities, Stability of metal complexes</p>	<b>15 L</b>

<p>of crown ethers, Determination of stability constants by spectrophotometric methods (Job's and Mole/slope ratio for composition), Bjerrum's pHmetric method.</p>	
<p><b>RECOMMENDED BOOKS:</b></p> <ol style="list-style-type: none"> <li>1. A. F. Wells, Structural Inorganic Chemistry– 5th edition (1984)</li> <li>2. J. H. Huheey, Inorganic Chemistry Principles, structure and reactivity, Harper and Row Publisher, Inc. New York (1972)</li> <li>3. J. D. Lee, Concise inorganic Chemistry, Elbs with Chapman and Hall, London</li> <li>4. M.C. Day and J. Selbin, Theoretical Inorganic Chemistry, Reinhold, EWAP</li> <li>5. Jones, Elementary coordination Chemistry</li> <li>6. Martell, Coordination Chemistry</li> <li>7. T. S. Swain and D. S.T. Black, organometallic Chemistry</li> <li>8. John Wulff, structure and properties of materials, vol 4, electronic properties, Wiley Eastern</li> <li>9. L. V. Azoroff, J. J. Brophy, Electronic processes in materials, McCraw Hill</li> <li>10. F.A. Cotton, R. G. Wilkinson. Advanced Inorganic chemistry</li> <li>11. William L. Jolly, Modern Inorganic Chemistry</li> <li>12. Manas Chanda, Atomic Structure and Chemical bonding</li> <li>13. P. L. Pauson, Organometallic Chemistry</li> <li>14. H. S. Sisler, Chemistry in non-aqueous solvents, Reinhold Publishing Corporation, USA, 4<sup>th</sup> edition (1965)</li> <li>15. H. J. Arnikar, Essentials of Nuclear Chemistry</li> <li>16. Friedlander, Kennedy and Miller, Nuclear and Radiochemistry.</li> <li>17. Fundamental Concepts of Inorganic Chemistry (Vol I to VII), A. K. Das and M. Das, CBS Publishers.</li> <li>18. Inorganic Chemistry, P. Atkins, T. Overton, J. Rourke, M. Weller, F. Armstrong, 5<sup>th</sup> Eds., Oxford University Press.</li> <li>19. Inorganic Chemistry, H. E. House, Elsevier Publishers.</li> </ol>	
<p><b>EP-MCTO23-203/EP-MCTA23-103: Elective Paper: Physical Chemistry-III [Credit 4, 60 L Hours]</b></p>	
<p><b>UNIT-I</b></p> <p><b>THERMODYNAMICS</b></p> <p>Introduction, revision of basic concepts: Entropy and third law of thermodynamics. Methods of determining the practical absolute entropies. Entropies of phase transition. Maxwell relations and its applications, thermodynamic equation of state.</p>	<p><b>15L</b></p>

<p>Ideal and non-ideal solutions, Thermodynamics of nonelectrolyte solutions. Raoult's law. Duhem-Margules equation and its applications to vapor pressure curves (Binary liquid mixture). Gibbs-Duhem equation and its applications to study of partial molar quantities. Chemical potential, variation of chemical potential with temperature &amp; pressure. Henry's law. Excess and mixing thermodynamic properties. Equilibrium constants and general conditions of equilibrium in terms of thermodynamic potentials. Numerical Problems.</p>	
<p><b>UNIT-II</b></p> <p><b>SURFACE PHENOMENA</b></p> <p>Adsorption, adsorption isotherms, surface area determination, Gibbs adsorption equation and its verification, Surface tension, electrical phenomena at interfaces including electrokinetic effects, micelles, reverse micelles, solubilization.</p> <p>Thermodynamics of micellisation, factors affecting critical micelle concentration (cmc), experimental methods of cmc determination. Application of photoelectron spectroscopy, ESCA and Auger spectroscopy to the study of surfaces. Significance of surface phenomena in advanced technologies like nanotechnology, drug formulation etc.</p>	<p><b>15L</b></p>
<p><b>UNIT-III</b></p> <p><b>KINETIC THEORY OF GASSES</b></p> <p>1. Postulates of kinetic theory of gases, P-V-T relations for an ideal gas, non-ideal behavior of gases, equation of state, compressibility factor, virial equation, van der Waal's equation, excluded volume and molecular diameter, relations of van der Waal's constants with virial coefficients and Boyle temperature.</p> <p>2. Molecular statistics, distribution of molecular states, deviations of Boltzmann law for molecular distribution, translational partition function, Maxwell Boltzmann law for distribution of molecular velocities, physical significance of the distribution law, deviation of expressions for average, root mean square and most probable velocities, experimental verification of the distribution law.</p> <p>3. Molecular collision in gases, mean free path, collision diameter and collision number in a gas and in a mixture of gases, kinetic theory of viscosity and diffusion.</p> <p>Numerical Problems</p>	<p><b>15 L</b></p>
<p><b>Unit IV</b></p> <p><b>Colloids</b></p> <p>Colloids: Colloidal solution, classification of colloids, Lyophobic and Lyophilic Colloids, Properties of colloids,</p> <p>Sol: Preparation, Theories of origin of charge on sol particles, Determination of charge on a</p>	<p><b>15 L</b></p>

<p>colloidal particle, Stability of sols, Association colloids, Spontaneous ageing of colloids, Factors affecting the spontaneous ageing, theories of spontaneous ageing, coagulation, kinetics of coagulation.</p> <p>Emulsion: Types of emulsion, preparation, properties, Characteristics, Identification test between two types of emulsions, microemulsion, reverse microemulsion, emulsifiers, demulsification.</p> <p>Gels: classification, methods for the preparation of gels, properties of gels, Applications of colloid science.</p>	
<p><b>RECOMMENDED BOOKS:</b></p> <ol style="list-style-type: none"> <li>1. Physical Chemistry–P. W. Atkins, Oxford Universitypress,8thedition,2006.</li> <li>2. Text book of Physical Chemistry– S. Glasstone.</li> <li>3. Principles of Physical Chemistry– Marron and Pruton.</li> <li>4. Physical Chemistry–G. M .Barrow,Tata-McGrawHill,Vthedition,2003.</li> <li>5. Advanced Physical Chemistry-Gurdeep Raj, Goel Publishing House</li> <li>6. Physical chemistry of surfaces –A. W. Adamson, 4thEd. JohnWiley,1982</li> <li>7. Introduction to Colloid and Surface Chemistry-D. J. Shaw, Butter worth Heinemann,1992.</li> <li>8. Surface Activity: Principles, Phenomena and Applications (Polymers, Interfaces and Biomaterials)–K.Tsujii,1stEd.Academic Press,1998.</li> <li>9. Thermodynamics for Chemists- S. Glasstone, 1965</li> <li>10. Thermodynamics: A core course- R. C. Shrivastava, S. K. Saha and A. K. Jain 2004</li> </ol>	
<p><b>EA-MCTO23-203/EA-MCTA23-103: Elective Paper: Analytical Chemistry-III [Credit 4, 60 L Hours]</b></p>	
<p><b>UNIT-I</b></p> <p><b>Structural Spectroscopic techniques</b></p> <p>Nuclear Magnetic Resonance (NMR) Magnetic and non-magnetic nuclei, Larmor frequency, absorption of radio frequency. Instrumentation (FT-NMR). Sample preparation, chemical shift, anisotropic effect, spin spin coupling, coupling constant, applications to simple structural problems.</p>	<p><b>15 L</b></p>
<p><b>UNIT-II</b></p> <p><b>Mass spectrometry (MS)</b></p> <p>Basic principle, working of mass spectrometer, ionization, types of ionization and classification of MS based on ionization, analyzers (magnetic sector, quadrupole, ion-trap,</p>	<p><b>15 L</b></p>

time of flight, formation of different types of ions, McLafferty rearrangements, fragmentation of alkanes, alkyl aromatics, alcohols and ketones, simple applications. <b>Problems: Simple structural problems based on IR, UV, NMR and MS</b>	
<b>UNIT III</b> <b>Microwave Spectroscopy</b> Rotation of Molecules, Rigid and Non-rigid Rotors; Quantum Aspects of Molecular Rotational Energy and Selection Rules of Transitions; Diatomic and Polyatomic Molecules, Techniques and Instrumentation; Applications of Microwave Spectroscopy. Numerical problems	<b>15 L</b>
<b>UNIT IV</b> <b>Raman Spectroscopy</b> Introduction, Pure rotational Raman Spectra, Vibrational Raman Spectra, Polarization of light from Raman and Infra-red spectroscopy, Techniques and Instrumentation, Near Infra-red FT-Raman Spectroscopy. Hyphenated Raman techniques. Numerical problems	<b>15 L</b>
<b>RECOMMENDED BOOKS:</b> 1. Instrumental Methods of analysis- Willard, Merrit, Dean and Settle. 2. Spectroscopic identification of organic compounds- R.M. Silverstein and G.C. Bassler 3. Spectroscopic methods in organic chemistry- D.H. Williams and I. Fleming 4. Absorption spectroscopy of organic molecules- V.M. Parikh 5. Applications of spectroscopic techniques in Organic chemistry- P. S. Kalsi 6. A Text book of Qualitative Inorganic Analysis- A. I. Vogel 7. Physical Methods in Inorganic Chemistry (DWAP)- R. Drago 8. Fundamentals of Analytical Chemistry – D.A. Skoog and D. M. West (Holt Rinehart and Winston Inc.) 9. Principles of instrumental analysis, Holler, Skoog, Crouch. Cengage learning India Pvt. Ltd. 10. Instrumental methods of chemical analysis, H. Kaur, PragatiPrakashan. 11. Fundamentals of molecular spectroscopy-C.N. Banwell and E. M.McCash.	
<b>MJ-MCPO23-205/ MJ-MCPA23-205: Practical Paper-III [Credit 4, 120 Hours]</b>	
<b>Chemistry Major Practical Course</b>	
<b>A) Organic Section</b> <b>Qualitative Analysis: Separation of Binary Mixture by Micro analytical Technique</b> Separation of binary mixture using physical and chemical methods. Identification	

of individual compounds and checking its purity by TLC. Preparation of the derivative of one of the compounds. The following types are expected: (i) Solid-Solid (ii) Non-volatile liquid- Non-volatile liquid (iii) Water-soluble/insoluble solid-Non-volatile liquid with compounds from the same or different chemical classes in all three categories.

The candidate is expected to carry out separation of at least **03** mixtures.

## **B) Inorganic Section**

### 1) Ore Analysis

- i) Determination of calcium and magnesium from Dolomite ore.
- ii) Determination of copper and iron from Chalcopyrite ore.

### 2) Alloy Analysis

- i) Determination of copper and zinc from brass alloy.
- ii) Determination of iron & chromium from steel alloy.

### 3) Separation of $\text{Fe}^{2+}$ $\text{Cu}^{2+}$ $\text{Ni}^{2+}$ by anion exchange.

## **C) Physical Section**

### 1) Refractometry:

- i) Determination of atomic refractions of H, C and Cl atoms.
- ii) Determination of composition of mixture of liquids.

### 2) Cryoscopy: Determination of apparent weight and degree of dissociation a strong electrolyte

### 3) Chemical kinetics: Kinetics of iodination of acetone in presence of strong acid

### 4) Phase Equilibrium: To construct phase diagrams for ternary system.

### 5) Viscosity: Determination of radius of sucrose molecules.

(New experiments may also be added)

## **D) Analytical Section**

1. To estimate the amount of  $\text{NH}_4\text{Cl}$  colorimetrically using Nessler's Reagent.
2. To determine the solubility of  $\text{PbI}_2$  in presence of different concentration of  $\text{KNO}_3$
3. To determine the solubility of  $\text{PbI}_2$  in presence of different concentration of  $\text{KCl}$
4. Potentiometric estimation of bleaching powder.
5. Determination of capacity of cation exchanger
6. Determination of capacity of anion exchanger

7. Determination of turbidity of water sample using nephelometer

8. To determine the iron content from soap sample

**MJ-MCPO23-206/ MJ-MCPA23-206: Practical Paper-IV [Credits 02, 60 hours]**

**Chemistry Minor Practical Course**

**A) Organic Section**

**Organic Estimations (Any Three):**

1. Determination of percentage of Keto-enol form.
2. Estimation of Ibuprofen.
3. Estimation of Aspirin.
4. Estimation of the Acid value of an oil.
5. Estimation of Caffeine.

Any other suitable experiments may be added.

**B) Inorganic Section**

Preparations and purity (Any four)

- 1) Tris (acetylacetonato)cobalt(III)trihydrate
- 2) Penta-aquachloro chromium(III)chloride
- 3) Hexathioureaplumbus(II)nitrate
- 4) Bis (acetylacetonato) copper(II)
- 5) Diaquabis(ethylenediamine) copper(II)iodide
- 6) Copper ferrite

**C) Physical Section**

1) Potentiometry:

- i. Determination of formal redox potential of system ( $\text{Fe}^{2+}$ ,  $\text{Fe}^{3+}$ )
- ii. Determination of binary mixture of halides.
- iii. Determination of dissociation constant of acetic acid.

2) Conductometry:

- i. Titration of ternary acid mixture of acids.
- ii. Verification of Onsager Equation for 1:1 type of strong electrolyte.
- iii. Determination of  $\Delta G$ ,  $\Delta H$ ,  $\Delta S$  of silver benzoate by solubility product method.

**D) Analytical Section**

1. Determination of sulphate by nephelometry/turbidimetry
2. Determination of isoniazid from pharmaceutical tablet
3. Determination of caffeine from tea powder
4. Determination of iron from iron tablet samples
5. Estimation of fatty acid from soap sample

**RECOMMENDED BOOKS:**

1. Instrumental Methods of analysis- Willard, Merrit, Dean and Settle.
2. Spectroscopic identification of organic compounds- R.M. Silverstein and G.C. Bassler
3. Spectroscopic methods in organic chemistry- D.H. Williams and I. Fleming
4. Absorption spectroscopy of organic molecules- V.M. Parikh
5. Applications of spectroscopic techniques in Organic chemistry- P. S. Kalsi
6. A Text book of Qualitative Inorganic Analysis- A. I. Vogel
7. Physical Methods in Inorganic Chemistry (DWAP)- R. Drago
8. Fundamentals of Analytical Chemistry – D.A. Skoog and D. M. West (Holt Rinehart and Winston Inc.)
9. Principles of instrumental analysis, Holler, Skoog, Crouch. Cengage learning India Pvt. Ltd.
10. Fundamentals of molecular spectroscopy-C.N. Banwell and E. M. McCash.
11. A textbook of Quantitative Inorganic Analysis– A. I. Vogel
12. Experimental Inorganic Chemistry-W. G. Palmer
13. The analysis of minerals and ores of the rarer elements– W. R. Schoeller
14. A. R. Powell, Charles, Griffin and Company Limited
15. A text book of Quantitative Inorganic Analysis– A. I. Vogel
16. Practical Organic Chemistry- Mann and Saunders.
17. A Handbook of Quantitative and Qualitative Analysis- H. T. Clarke.
18. Organic Synthesis Collective Volumes by Blat.

## M.Sc. I Syllabus (NEP-2020)

To be implemented from July 2023 onwards Semester I & II

### Nature of Question paper

**Total Marks 80**

**Instructions: 1) Attempt in all five questions.**

**2) Question No. 1 is compulsory.**

**3) Attempt any two questions from Section-I and any two questions from Section-II.**

**4) All questions carry equal marks. Figures to right indicate marks.**

Q.1 Solve the Following (Compulsory) 1 Mark each 16 Marks

a)

.To

p)

#### Section I

Q.2. Two sub questions (8 marks each) or Three sub question (6+6+4 marks) = 16 Marks

Q.3. Two sub questions (8 marks each) or Three sub question (6+6+4 marks) = 16 Marks

Q. 4 Two sub questions (8 marks each) or Three sub question (6+6+4 marks) = 16 Marks

#### Section II

Q.5. Two sub questions (8 marks each) or Three sub question (6+6+4 marks) = 16 Marks

Q.6. Two sub questions (8 marks each) or Three sub question (6+6+4 marks) = 16 Marks

Q.7. Writes notes on **any four** of the following (Out of Six) 16 Marks

a)

.To

e)

**M.Sc. I Syllabus (NEP-2020)**  
**To be implemented from June 2023 onwards**  
**Nature of Practical Examination**

**Semester I:**

**Practical Paper I and II 100+50 = 150 marks**

Day 1 Inorganic 40 marks [Major Expt. (20) + Minor Expt. (10) + Oral (5) + Journal (5)]

Day 2 Organic 35 marks (15+10+5+5)

Day 3 Physical 40 marks (15+15+5+5)

Day 4 Analytical 35 marks (15+10+5+5)

**Semester II:**

**Paper III and IV 100+50 = 150 marks**

Day 1 Inorganic 35 marks (15+10+5+5)

Day 2 Organic 40 marks (20+10+5+5)

Day 3 Physical 35 marks (15+10+5+5)

Day 4 Analytical 40 marks (20+10+5+5)
